Experiment -1

Student Name: Karandeep Kaur

UID: 24BCS10360

Branch: BE CSE

Section/Group: 601-A

Semester: 5th

Date of Performance: 13-07-26

Subject Name: Salesforce-1

Subject Code: 24CSH-316

Aim: To implement SQL DDL, DML, DQL, and DCL commands by creating and populating a Hospital Management database with integrity constraints, and to retrieve specific records using SQL queries to understand relational database operations.

Requirements (Hardware/Software): Software: CodeChef

Code:

--Complete the queries below to insert data into the tables & retrieving the first records from the first 3 tables.

-- Inserting Data into Doctors Table

INSERT INTO Doctors (DoctorID, Name, Specialization, ContactNumber, Email) VALUES

(1, 'Dr. John Smith', 'Cardiology', '1234567890', 'john.smith@hospital.com'),

(2, 'Dr. Lisa Brown', 'Neurology', '0987654321', 'lisa.brown@hospital.com');

-- Inserting Data into Patients Table

INSERT INTO Patients (PatientID, Name, DOB, Gender, ContactNumber, Address) VALUES

(1, 'Alice Johnson', '1990-05-21', 'Female', '1112223333', '123 Main St'),

(2, 'Bob Martin', '1985-08-14', 'Male', '4445556666', '456 Elm St');

-- Inserting Data into Appointments Table

INSERT INTO Appointments (AppointmentID, PatientID, DoctorID, AppointmentDate, Status) VALUES

(1, 1, 1, '2025-02-15', 'Scheduled'),

(2, 2, 2, '2025-02-16', 'Completed');

-- Inserting Data into Treatments Table

INSERT INTO Treatments (TreatmentID, PatientID, DoctorID, Diagnosis, TreatmentDescription, TreatmentDate) VALUES

(1, 1, 1, 'Hypertension', 'Prescribed medication', '2025-02-15'),

(2, 2, 2, 'Migraine', 'MRI Scan and medications', '2025-02-16');

-- Inserting Data into MedicalRecords Table

INSERT INTO MedicalRecords (RecordID, PatientID, TreatmentID, Notes) VALUES

(1, 1, 1, 'Patient responding well to treatment'),
(2, 2, 2, 'Further evaluation required');

-- Inserting Data into Billing Table

INSERT INTO Billing (BillID, PatientID, TreatmentID, Amount, BillDate, Status) VALUES

(1, 1, 1, 200.00, '2025-02-15', 'Paid'),

(2, 2, 2, 500.00, '2025-02-16', 'Unpaid');

--Now write the queries for retrieving the first records from the first three tables (Doctors, Patients, Appointments).

SELECT * FROM Doctors WHERE DoctorID = 1;

SELECT * FROM Patients WHERE PatientID = 1;

SELECT * FROM Appointments WHERE AppointmentID = 1;

Output

codechef.com/learn/course/sql-intermediate/JTST2/problems/ASQLPR103?tab=statement

Prev

Statement	Submissions	Solution	AI Help
1	Dr. John Smith	Cardiology	1234567890 john.smith@hospital.com
2	Dr. Lisa Brown	Neurology	987654321 lisa.brown@hospital.com

Patients Table

PatientID	Name	DOB	Gender	ContactNumber	Address
1	Alice Johnson	21-05-1990	Female	1112223333	123 Main St
2	Bob Martin	14-08-1985	Male	4445556666	456 Elm St

Appointments Table

AppointmentID	PatientID	DoctorID	AppointmentDate	Status
1	1	1	15-02-2025 0.00	Scheduled
2	2	2	16-02-2025 0.00	Completed

Treatments Table

TreatmentID	PatientID	DoctorID	Diagnosis	TreatmentDescription	TreatmentDate
-------------	-----------	----------	-----------	----------------------	---------------

```
21 (2, 2, 2, 'Migraine', 'MRI Scan and medications', '2025-02-16');
22
23 -- Inserting Data into MedicalRecords Table
24 INSERT INTO MedicalRecords(RecordID, PatientID, TreatmentID, Notes) VALUES
25 (1, 1, 1, 'Patient responding well to treatment'),
26 (2, 2, 2, 'Further evaluation required');
27
28 -- Inserting Data into Billing Table
29 INSERT INTO Billing (BillID, PatientID, TreatmentID, Amount, BillDate, Status) VALUES
30 (1, 1, 1, 200.00, '2025-02-15', 'Paid'),
31 (2, 2, 2, 500.00, '2025-02-16', 'Unpaid');
32
33 --Now write the queries for retrieving the first records from the first three tables
```

Your Output

DoctorID	Name	Specialization	ContactNumber	Email
1	Dr. John Smith	Cardiology	1234567890	john.smith@hospital.com

PatientID	Name	DOB	Gender	ContactNumber	Address
1	Alice Johnson	1990-05-21	Female	1112223333	123 Main St

✓ Excellent work!

Learning Outcome:

- Create and manage database tables using SQL **DDL** commands.
- Insert and manipulate data using **DML** statements.
- Retrieve records efficiently using **DQL (SELECT)** queries with conditions.
- Understand and implement relational database concepts through a Hospital Management System database.
